Product Description

Door Opener Controller

With the first Z-Wave controlled electronic door opener, the house entrance door – especially in multi-family houses – can be integrated into home automation. The POPP door opener controller replaces the existing door opener, communicates encrypted with the Z-Wave control center and enables wireless door opening with remote controls, smartphone or tablet PC. This way you can enter the house without using a key. Furthermore, you can open the door for your children when on the move. Your children dont need an own key.

In multi-family houses, the small POPP door opener module will be installed at any separate apartments intercom directly and included into the Z-Wave system there.

The door opener works with battery or can be powered over the bell transformers power supply. It is also possible to connect door mechanisms with monitor contact.Features:

- Integrates electrical door opener into the Z-Wave network
- Remote control for door opener
- For single- and multi-family houses
- Power supply: Battery or bell transformer
- Wireless technology: Z-Wave Plus
- Dimensions: 56 x 25 x 14 mm
