6,09 EUR

Item no.: 320168
shipping weight: 0.10 kg
Manufacturer: BPI

Product Description

Banana Pi BPI-A-007 - BerryClip 6 LED Add-On DIY Board This module is designed specifically for learning to control the GPIO of Banana Pi. There are 6 LEDs, 1 button and 1 beeper on the module; all of them can use the GPIO of the Banana Pi for controlling. The beginner can learn the INPUT mode of GPIO through the button and learn the OUTPUT mode through the LEDs or beeper. Features

- 6x LEDs (2x blue, 2x yellow, 2x red)
- 1x single button on board
- 1x beeper on board

Typical Applications

- Hardware beginner learning
- Education

How to Use

Insert the BerryClip into the Banana Pi, but pay attention to the direction! The correct direction of the insert module is above the Banana Pi's PCB. Port

- Banana Pi 2x13 port, also can be used on a Raspberry Pi.

Product Parameters

- Working voltage: 3.3 V
- LED max. current: 8 mA
- Beeper max. current: 12 mA
