shipping weight: 0.10 kg
Manufacturer: Philio

Product Description

4-in-1 Sensor (Door/Window, Temperature, Brightness, Motion)

The Philio Multi Sensor is a Z-Wave door/ window sensor, motion sensor, luminescence sensor and temperature sensor in one package. Thanks to this the PST02-1A can be used as a security device or home automation device, e.g. to send an alarm when a motion is detected, turn the light on/ off automatically at night or to adjust the heater.

The product consists of two elements - the detector and the magnet. The magnet is mounted on the moving part of the window or of the door. The other part is placed on the frame. Note: The illumination sensor does not work with Fibaro Homecenter 2 and Zipabox yet. When included securely the device is able to accept secure commands and to send secure commands to other devices. The commands and the receiver of the commands sent out on single click and on double click of the rocker can be defined in configuration parameters and association groups.
