Manufacturer: Cambium Networks

Product Description

PTP 650 LPU and Grounding Kit (One Kit Per End)

PTP 650 LPUs provide transient voltage surge suppression for PTP 650 installations. Each PSU or Aux drop cable requires two LPUs, one near the Outdoor Unit and the other near the linked device, usually at the building entry point.

One LPU and grounding kit is required for the PSU drop cable connection to the Outdoor Unit. If the Outdoor Unit is to be connected to an auxiliary device, one additional LPU and grounding kit is required for the Aux drop cable.

PTP 650 LPUs are not suitable for installation on SFP copper Cat5e Ethernet interfaces. For SFP drop cables, obtain suitable surge protectors from a specialist supplier. SFP optical Ethernet interfaces do not require surge protectors.
