Product Description

PRIEDASFPC (058R-00275) - Siemens VDO Tachograph Front Panel Cable The Siemens VDO Digital Tachographs releases 1.3a and higher support remote tachograph file download via the front interface. Teltonika's R&D team created a cable that fits all the tachographs - ergonomic design ensures easy installation and does not cover the buttons or the screen of the tachograph. The cable connects to the FMB640 K-line (pin 20). Via this pin you can receive tachograph files and live tachograph data. This means that both CAN lines of the device can be used for other purposes (FMS/external CAN sensors). The front panel cable is 4 meters long, therefore it will be easy to mount FMB640 regardless of the tachograph mounting position in the vehicle. Main advantages:- The main advantage is the possibility to download tachograph files from the 12 Volt tachographs that do not support remote tachograph files transfer through the C connector (rear connector). 24 Volt tachographs are also supported.

- Supported tachographs: Siemens VDO DTCO 1.3a, 1.4, 2.0, 2.1, 2.2, 3.0, 4.0-
- Supported devices: FM6300/FMB640/FMM640/FMC640-
- Supported voltage range: 12 and 24 Volts systems-
- Output/input signal: K-line-
- Length: 4 meters-
- Operating temperature: -60°C to +90°C
