Product Description

MikroElektronika RaspyPlay4 HiFi Audio Add-On Board for Raspberry Pi

Ever since its inception, Raspberry Pi has been a popular solution for home multimedia centers for many people. But the poor sound reproduction abilities of the Pi were a deal-breaker for anyone remotely interested in Hi-Fi.

Not anymore. Play hi-quality audio from your Raspberry Pi B+ with RaspyPlay4. This add-on board features the PCM5122 DAC with excellent dynamic performance for audiophile-worthy reproduction of your favorite music, on a budget. It supports FLAC, ALAC, MP3 and WMA sound formats. Software-wise, it's compatible with several solutions, but we recommend RuneAudio. Store your favorite albums on USB flash, USB hard drive, SD card, on a NAS server, or even stream it through AirPlay — RaspyPlay4 supports it all. Kick your feet up, relax and enjoy.

- PCM5122 DAC for great audio performance
- Built-in RuneAudio software
- Supports FLAC, ALAC, MP3 and WMA sound formats
- Web interface that enables playback control from a range of devices
- Ability to store music on USB Flash, USB hard drive, SD card, network-attached storage (NAS) server or to stream through AirPlay
- Ultra low noise regulator
- 2x standard RCA stereo audio jacks
- Line-out TSOP34836 IR receiver for remote control
- Hardware volume control
- LCD connector
