

Item no.: 357994

Walli Roller Shutter Unit

from **51,55 EUR**

Item no.: 357994
shipping weight: 0.50 kg
Manufacturer: Fibaro

Product Description

The FIBARO Walli Roller Shutter Unit controls motors of roller shutters, awnings, venetian blinds and other AC-powered drives. The small flush-mounted module is combined with a visually appealing switch that controls all your blinds with one click and reacts in real time to changing environmental conditions.

The small FIBARO Walli Roller Shutter Unit measures both the active power and the energy consumption and converts this into a visual signal by means of the LED ring. Installation is child's play and can be carried out according to your individual wishes.

FIBARO Walli Roller Shutter Unit is compatible with the switch ranges of other manufacturers: GIRA System 55, Legrand Celiane and Schneider Odace. An adapter is required for proper installation.

Check the specifications to see which devices work with FIBARO Walli. If you are satisfied with the look of your current sockets or switches, just change the insert and enjoy many smart functions without having to change the design.
