Product Description

All power options support a wide voltage range of 24 – 57 V. However, you can not mix the voltages. Each PoE-out port can supply up to 25W of power. All the ports combined are limited to 130W, which should be enough for most setups. You can specify maximum available power from your power sources manually, if necessary. If you're using PoE-out to power other devices, you have to provide power via the 2-pin connector to power those. This product also features single voltage PoE-out – it can either be 802.3af/at compatible OR low-voltage PoE-out. That is determined by the voltage on the 2-pin connector, as no voltage conversion is done on this board.

When it comes to processing power and available use-cases, this router can do it all:

- PPPoE termination
- DHCP to customers
- Local Queuing
- MPLS Push/Pop/Swap and MPLS Forwarding
- VPLS/VXLAN Termination
- Hardware bridging, and so much more!
