from **28,22 EUR**

Item no.: 335680

shipping weight: 0.30 kg

Manufacturer: Gigaset Communications

Product Description

Gigaset Box 100 black

The simple DECT base station is suitable for analog connections to the a/b port of a router or a TAE socket. As with the GO-Box 100 and the Box 200A, up to 6 Gigaset H or HX handsets can be added. The basic functions of all Gigaset bases include address book transfer between handsets, internal calls, forwarding a call to another handset with callback/recall function and repeater operation to increase the range with a Gigaset repeater or repeater HX.

This device is intended and designed for the telephone connection in the German network; unrestricted operation outside of Germany cannot be guaranteed. TELEPHONE BASE STATION FOR MORE FLEXIBILITY

The base station can be set up flexibly. Thanks to the long range of up to 300 m, you are always easy to reach. SIMPLY COMPATIBLE

Register up to 6 Gigaset HX handsets to your base station. Ideal for companies, families or for the home office. PERFORMANCE CHARACTERISTICS

Make internal calls free of charge or make 2 calls at the same time. From 2 registered handsets and the Gigaset Box 100, this is no longer a problem. SIMPLE TO OPERATE

Using the registered handsets makes operating your Box 100 base station very easy. QUALITY MADE IN GERMANY

Gigaset BOX 100 is made in Germany - thanks to ECO DECT, radio transmission is automatically reduced depending on the distance between the handset and the base station.
