📄 Product Description

Flick Gesture Tracking Add-on Board for Raspberry Pi, Large

Pi Supply Flick Large is a standalone breakout module and is the largest board in the Flick family. It enables you to add 3D tracking and gesture functionality to your Raspberry Pi, BeagleBone, Arduino or Genuino board. In fact, you can connect it to any I2C enabled device via the supplied ribbon cables.

Flick boards integrate perfectly into your I2C project, providing new methods of control through gesture and touch. You can even hide your Flick project behind a non-conductive material. Using near field gesture technology, it still detects gestures from up to 10 cm away within a 3D area. That means you could swipe your hand, tap your finger or draw a shape, and the Flick Large will track it for you.

Flick boards are plug-and play so you can it get up and running within minutes. Pi Supply offer software libraries to show you what is possible and help you to get your project started. With Flick you can control computers, TVs, music systems, and so on.

Compatible with:

- Raspberry Pi
- BeagleBone
- Arduino
- Genuino
- Any other I2C enabled devices

This kit contains:

- Flick Large board
- Ribbon cables
- Pi Supply stickers
