Product Description

ARS-AS01 - Antenna Stand with Magnetic Base

ALFA ARS-AS01 is a magnetic mount antenna base with RP-SMA connector. It comes with an antenna extension cable built into the base (1 m). This is a great way to get more signal on your ALFA Network wireless receiver, such as ALFA models AWUS036H or AWUS036NH. Simply connect this magnetic base to your ALFA adapter's RP-SMA port with the built-in cable and then connect the ALFA antenna you already own to the top of the magnetic mount base. Now you can place your antenna up to 1 m away from the adapter for improved reception. Note this item itself is not an antenna, it is a base that you can use with your compatible RP-SMA antenna.

- Type: Magnetic antenna base
- Connector: RP-SMA female
- Cable length: 1000 mm
- Impedance: 50 ohm
- Operating frequency: 1 ~ 6 GHz
- Attenuation: -5.5 dB max.
- Coaxial cable: RG-174
