Item no.: 352907
shipping weight: 0.30 kg
Manufacturer: Arduino

📄 Product Description

AKX00037 - Make Your UNO Kit
A kit with all the components to build your very own Arduino UNO and synthesizer shield. Following the online step by step guide, you will learn how to solder your own Arduino and synth shield. By the end, you would have built your own digital instrument ready to create cool sounds.
The kit includes

- Soldering test board: Start your learning journey by soldering some components in a test board. This small board can be used as a keychain, perfect for makers.
- Debug board: A quick and handy way to test your future projects.
- UNO board: All the components you need to build your own USB-C Arduino UNO.
- Synth shield: All the components to build an Arduino UNO compatible synthesizer shield.
