Item no.: 358048

Thermostat for water heaters (with humidity sensor) Version 2

from **109,27 EUR**

Item no.: 358048
shipping weight: 0.50 kg
Manufacturer: MCO Home

🗎 Product Description

The thermostat for water heating (with humidity sensor) version 2 is a thermostat of the second generation of MCO Home floor heating thermostats. The thermostat is designed to control the temperature of rooms in Z-Wave Smart Homes. It is used to control water-based underfloor heating systems.

The second generation has functionality via association groups with Z-Wave binary switches. This means that these devices, such as relays or intermediate plugs, can be linked directly to the thermostat. This allows you to operate any on/off heating switch without the need for a static Z-Wave gateway to be active.

MCO Home's advanced glass touch thermostats can be used to control different heating and cooling systems - for example: Heating cable, heating foil, water valve, electric valve, boiler, fan coils, solar energy controllers, heat pumps, ventilation systems, etc.

Features:

- Power supply: AC85-260V, 50/60Hz
- Output load: max. 5A
- Glass surface with capacitive buttons
- Programmable heating schedule: 4 events every weekday
- Control modes: Manual, Auto (time periods), Holiday (energy saving mode)
- 2 temperature sensors for heating control
- Temperature setting: 5-37°C (adjustable)
- Celsius or Fahrenheit (adjustable)
- Internal temperature sensor: NTC 15K
- Built-in temperature sensor and humidity sensor
- Radio technology: Z-Wave Plus
