Product Description

Electrical Heating Thermostat with humidity sensor Version 2

The MCOEMH7-EH2 thermostat is a device for room temperature control, equipped with Z-Wave wireless technology. It is applied to control electrical heating systems such as heating cable, electro-thermal film, heating actuator, electrical globe valve etc. The wall thermostat MCOEMH7-EH2 requires a static installation with mains power. Thanks to its modern design with capacitive glass touch panel it is particularly suited for visible installation in living areas. With the modern designed glass touch thermostats by MCO you can control various heating and cooling systems – e.g. heating cable, heating film, water valve, electrical valve, boiler, fan coil, solar energy controller, heat pump, ventilation system etc.

Features:

- Tempered glass panel with capacitive buttons
- Programmable schedule: 4 events each day of 7 days 5+2; 5+1+1
- Operation: Manual, Auto (Time periods), Holiday (Energy saving)
- With two temperature sensors for control
- Internal Temp. Sensor: NTC 15K
- Humidity Sensor
- Power supply: 230V
- Wireless Technology: Z-Wave Plus
