Product Description

The sensor switches on the circuit when it detects a hand movement from a distance of 5-6 cm. The device can be used to illuminate mirrors, cabinets, etc. This device is used to switch the light on automatically when someone comes within range of the IR sensor. It switches off as soon as the next movement is detected by the sensor. The device is user-friendly, practical and helps to reduce power consumption. The device works well in the living room, kitchen, bedroom, etc.
